Benchmark Comparison

Annual Returns vs S&P 500 / Nasdaq

Period	Yccount (XIRR)	Zccount-TOD (XIRR)	S&P 500	Nasdaq	Yccount Alpha (vs S&P)
2024	+107.4%	?	+23.3%	+28.6%	+84.1pp
2025	+21.5%	?	+16.4%	+20.4%	+5.1pp
2026 YTD	-6.0%	?	+2.2%	-0.9%	-8.2pp
Overall	19.4%/yr	47.8%/yr	~20%/yr	~24%/yr	?

Note: Account XIRR (time-weighted for cash flows) vs index price return. Not perfectly apples-to-apples, but directionally accurate.

Concentration Analysis

Yccount ? Top-heavy, single-stock risk:

Symbol	Mkt Value	Weight	Risk Note
TSLA	$37,326	58%	Extreme concentration
FCX	$7,874	12%	At analyst target, limited upside
GOOGL	$7,790	12%	
IBIT	$7,132	11%	Crypto/BTC proxy
V	$1,882	3%	Slightly underwater (-6%)
EXLS+DXYZ	$431	1%	Small positions

Zccount Individual-TOD ? More balanced, still NVDA-heavy:

Symbol	Mkt Value	Weight	Sector
NVDA	$32,333	34%	Tech/AI
GOOGL	$19,603	20%	Tech/AI
AAPL	$16,627	17%	Tech
B (Barrick)	$10,026	10%	Gold/Materials
WFC	$5,730	6%	Financials
XOM+VDE	$7,247	7%	Energy
BRKB	$2,988	3%	Diversified
DAL+ITA+JETS	$1,951	2%	Travel/Defense

Rebalancing Notes (2026-02-10)

Yccount ? No new DCA capital; rebalance within existing positions

Action	Rationale
Trim TSLA ~$5K-8K	58% single-stock risk is extreme. Take some profit (+$12K unrealized) to diversify
Add GOOGL with TSLA proceeds	2025 return +66%, AI + Cloud + Ads triple engine, valuation reasonable. Target ~20% weight
IBIT hold	11% BTC allocation is reasonable as-is
FCX hold, don't add	At $63.61 vs avg analyst target $61.47 ? above consensus. Cost $59, only +8% gain. Limited up
V hold	Small position ($1,882), slightly underwater (-6%). Visa is a compounder ? let it recover

Zccount Individual-TOD ? 71% in Tech/AI (NVDA+GOOGL+AAPL)

Action	Rationale
Trim NVDA $3K-5K	34% is overweight. AI chip competition intensifying (AMD, custom ASICs). Lock in some gains
Add ITA with NVDA proceeds ~$2K	Currently <1% ($742) despite being 2025's #2 performer (+70%). Global defense spending trend is
Add BRKB ~$1K-2K	Defensive ballast at 3%. Berkshire's record cash pile provides downside protection
B (Barrick) hold	10% is appropriate. Gold thesis still valid: central bank buying, geopolitical hedging, inflation hed
WFC + XOM/VDE hold for income	WFC cumulative dividends ($3,379) have fully repaid cost basis ? effectively free shares. Keep comp
Consider merging DAL+JETS ? ITA	DAL+JETS combined 2% is too small to matter. ITA captures both defense and aerospace/travel in

Priority Actions for Tomorrow (no new capital ? internal rebalance only)

1. Yccount: Sell ~$5K TSLA ? Buy ~$5K GOOGL (TSLA 58%?50%, GOOGL 12%?20%)
2. Zccount: Sell ~$5K NVDA ? Buy $2K ITA + $2K BRKB + $1K cash reserve

Post-Rebalance Allocation

Yccount (target):

Symbol	Before	Wt%	?	After	Wt%
TSLA	$37,326	58%	?	$32,326	52%
GOOGL	$7,790	12%	?	$12,790	20%
FCX	$7,874	13%		$7,874	13%
IBIT	$7,132	11%		$7,132	11%
V+EXLS+DXYZ	$2,313	4%		$2,313	4%

Zccount Individual-TOD (target):

Symbol	Before	Wt%	?	After	Wt%
NVDA	$32,333	34%	?	$27,333	28%
GOOGL	$19,603	20%		$19,603	20%
AAPL	$16,627	17%		$16,627	17%
B	$10,026	10%		$10,026	10%
WFC	$5,730	6%		$5,730	6%
BRKB	$2,988	3%	?	$4,988	5%
XOM+VDE	$7,247	8%		$7,247	8%
ITA	$742	1%	?	$2,742	3%
DAL+JETS	$1,209	1%		$1,209	1%

Tax Impact

Yccount ? Sell ~12 shares TSLA:

- Proceeds: ~$5,008 (12 ? $417.32)
- Realized gain: ~$1,636 (avg cost ~$281)
- Tax lot strategy: Sell highest cost lots first (late 2025 DCA @ $350+) to minimize gain; or sell oldest lots (Jun 2024 @ $177.50) for long-term capital gains rate
- Shares bought before Feb 2025 qualify for long-term rate

Zccount ? Sell ~26 shares NVDA:

- Proceeds: ~$4,941 (26 ? $190.04)
- Realized gain: ~$1,730 (avg cost ~$123)
- Tax lot strategy: DCA from Mar 2024 ? most shares held >1 year = long-term capital gains
- Sell highest cost lots to minimize taxable gain

Commodity?Stock Correlation Analysis (2026-02-09)

Charts: output/commodity_stock_correlation.png, commodity_stock_10yr_analysis.png, copper_trend_2024_2026.png

XOM vs Oil: Structural Decoupling (not temporary)

10-Year Rolling Correlation by Period:

Period	Oil vs XOM Corr	Oil Return	XOM Return	Note
2015-2019	+0.41	+16%	-9%	Weak positive
2020 COVID	+0.57	-21%	-37%	Crashed together
2021-2022 Energy bull	+0.69	+69%	+193%	XOM 3x leveraged oil
2023 Range-bound	+0.75	-7%	-3%	Still tracking
2024 Pioneer closed	-0.01	+2%	+9%	Breakpoint
2025 Post-merger	-0.31	-21%	+16%	Reversed ? oil down, XOM up

Why it's structural, not cyclical:

1. Pioneer acquisition (closed May 2024) ? XOM became #1 US oil producer. Permian breakeven ~$35/bbl vs market $70 ? profitable even if oil drops 50%
2. Revenue mix shift ? Upstream (oil-sensitive) dropped from ~70% to ~55%; Downstream + Chemical + LNG now ~45%. Refining profits often move inversely to crude
3. $100B+ buybacks (2022-2025) ? Persistent EPS growth from share reduction, independent of oil price
4. LNG long-term contracts ? Golden Pass + Mozambique projects on fixed-price contracts, not spot-exposed

Investment implication: XOM is no longer a pure oil bet. It's a diversified energy + chemical compounder. Hold for dividends (cumulative $2,587 received, effectively repaid cost basis). Oil price drops won't cause proportional XOM declines.

Copper vs FCX: Strong Correlation Intact

10-Year Rolling Correlation by Period:

Period	Cu vs FCX Corr	Copper Return	FCX Return
2015-2019	+0.67	-2%	-41%
2020 COVID	+0.98	+24%	+98%
2021-2022	+0.82	+7%	+43%
2023	+0.73	+3%	+14%
2024	+0.92	+3%	-8%

2025	+0.60	+41%	+36%

Key difference from XOM: FCX remains a leveraged copper play. Correlation has been consistently +0.60 to +0.98 over 10 years. When copper drops, FCX drops harder. When copper rises, FCX rises more.

Copper Price Trend (2024-2026)

Metric	Value
Current price	$5.95/lb (near all-time high)
2024 return	+3.0% (volatile: $3.69?$5.12)
2025 return	+41.2% ($3.99?$5.63)
2026 YTD	+5.4% ($5.64?$5.95)
50-day MA	$5.64 (price above)
200-day MA	$5.06 (price above)
Trend	Golden cross ? bullish

2026 Institutional Forecasts:

Source	Copper Price Target	Thesis
Goldman Sachs	$10,710/mt (~$4.86/lb) avg H1	Conservative, expects mild pullback
J.P. Morgan	$12,500/mt (~$5.67/lb) avg Q2	Deficit of ~330kmt
Citi	$13,000-15,000/mt ($5.90-6.80/lb)	Most bullish

Supply-Demand Drivers:

- Supply crunch: Grasberg mine (world #2) force majeure ? 70% capacity offline until Q2 2026. Global mine supply growth only +1.4%
- AI demand: Hyperscale AI data center uses up to 50,000 tons of copper (vs 5,000-15,000 for conventional). 2026 data center copper demand ~475kmt (+110kmt YoY)
- Grid infrastructure: 60%+ of copper demand growth from power grid buildout
- Deficit: Global refined copper shortfall estimated 150,000-330,000 tonnes in 2026

FCX Valuation at Current Copper Price

Metric	Value
FCX price	$63.61
Avg cost	~$59
Gain	+8%
Forward PE	19.0x
Trailing PE	41.9x
Analyst avg target	$61.47 (below current!)
Analyst high target	$71.00

Assessment: Copper fundamentals are strong (supply deficit + AI demand), but FCX at $63.61 already trades above analyst consensus ($61.47). Forward PE 19x is reasonable if earnings catch up (trailing 41.9x ? forward 19x implies analyst expect earnings to double). Risk: copper at all-time highs is vulnerable to macro slowdown; FCX would amplify any copper pullback (leveraged beta).

Verdict: Hold, don't add. If copper breaks $6.50+, analyst targets will be revised up and FCX could run to $70+. If copper pulls back to $5.00, FCX likely drops to mid-$40s.

Stock Picking Alpha Analysis (2026-02-09)

Methodology: For each stock, compare actual return from entry date to now vs. if the same dollar amount had been invested in S&P 500 on the same date.

Yccount ? Actual Entry vs S&P 500 Timing-Matched

Stock	Entry Date	Cost	Current Value	Return	If S&P	S&P Return	Alpha
TSLA	2024-06-17	$26,533	$37,333	+40.7%	$31,157	+17.4%	+23.3pp [Y]
GOOGL	2025-09-16	$6,230	$7,788	+25.0%	$6,540	+5.0%	+20.0pp [Y]
EXLS	2026-02-04	$320	$400	+25.0%	$324	+1.2%	+23.8pp [Y]
FCX	2026-01-15	$7,355	$7,875	+7.1%	$7,529	+2.4%	+4.7pp [Y]
DXYZ	2026-01-21	$30	$31	+4.4%	$30	+1.3%	+3.1pp [Y]
V	2025-07-24	$2,003	$1,881	-6.1%	$2,182	+8.9%	-15.0pp [N]
IBIT	2025-02-24	$10,499	$7,132	-32.1%	$12,073	+15.0%	-47.1pp [N]
TOTAL		$52,971	$62,440	+17.9%	$59,834	+13.0%	+4.9pp [Y]

Yccount alpha: +$2,606 more than S&P. Biggest contributor: TSLA (+$6,176 vs S&P). Biggest drag: IBIT (-$4,941 vs S&P).

Zccount Individual-TOD ? Actual Entry vs S&P 500 Timing-Matched

NVDA	2024-03-04	$21,006	$24,902	+18.5%	$25,368	+20.8%	-2.2pp [N]
VDE	2021-03-31	$2,213	$3,105	+40.3%	$3,232	+46.0%	-5.7pp [N]
TOTAL		$59,447	$84,254	+41.7%	$74,789	+25.8%	+15.9pp [Y]

Zccount alpha: +$9,465 more than S&P. 9 out of 11 stocks beat the timing-matched S&P benchmark.

Combined: Both Accounts

	Your Picks	If S&P 500	Difference
Total invested	$112,417	$112,417	?
Current value	$146,694	$134,624	+$12,071
Return	+30.5%	+19.8%	+10.7pp

Key Takeaways

You have real alpha, but it's unevenly distributed:

1. Zccount is where your edge lives ? 9/11 stocks beat S&P (82% win rate), +15.9pp alpha. Sector-diversified picks (B, WFC, ITA, DAL) all significantly outperformed
2. Yccount alpha is fragile ? TSLA alone generated +$6,176 alpha, but IBIT wiped out -$4,941. Net alpha only +$2,606 on $53K invested

3. IBIT is the biggest lesson ? $10,499 invested, now $7,132. Same money in S&P would be $12,073. Cost: $4,941 in foregone returns
4. NVDA entered slightly late ? Mar 2024 entry yielded +18.5%, but S&P also did +20.8% over same period. The big NVDA gains (2023: +239%) were before your entry
5. Your strength: industry trend picking ? TSLA (EV/autonomy), GOOGL (AI), B (gold/inflation), WFC (rate cycle) were all correct macro calls. Weakness: speculative bets (IBIT, DXYZ)

Verdict: Continue stock picking. Avoid speculative/crypto positions >5% of portfolio. Your edge is strongest in Zccount-style diversified sector bets.

Exit Strategy Analysis (2026-02-11)

Based on backtesting 5 exit strategies against actual portfolio holdings (2021-2026).

Charts: output/portfolio_analysis/exit_strategy_comparison.png, actual_vs_hold_pnl.png, opportunity_cost.png, ftnt_aapl_swap.png

Full data: output/portfolio_analysis/exit_strategy_analysis.json

Strategy Comparison

Strategy	Total Value	P&L	Return	vs Actual
Buy & Hold (best)	$191,671	+$63,434	+49.5%	+$10,897
Categorized Rules	$187,641	+$59,404	+46.3%	+$6,867
Your Actual	$180,774	+$52,537	+41.0%	?
MA50 Exit	$115,573	-$12,664	-9.9%	-$65,201
15% Trailing Stop	$110,249	-$17,988	-14.0%	-$70,525

Core finding: Buy & Hold beats every active exit strategy by a wide margin. Trailing stop and MA-based exits are catastrophic for DCA-entered positions ? they trigger on early volatility and sell stocks that later 3-5x.

Closed Positions: Opportunity Cost

Stock	Sell Date	Sell Price	Current Price	Held Value	Diff	Verdict
CCL	2024-10-29	$21.86	$32.81	$21,327	-$7,118	Sold too early
BA	2024-12-30	$173.50	$244.71	$9,788	-$2,848	Sold too early
FTNT	2026-01-20	$75.23	$85.93	$8,593	-$1,070	Sold too early
METV	2026-01-20	$18.59	$17.21	$1,728	+$139	Good timing
AMD	2026-01-20	$231.72	$216.00	$6,480	+$472	Good timing

Total opportunity cost from early sells: ~$10,900

FTNT ? AAPL Swap (2026-01-20)

Metric	FTNT (if held)	AAPL (bought)
Shares	100	30
Swap-day price	$75.23	$246.96
Current price (02-09)	$85.93 (+14.2%)	$274.62 (+11.2%)
Current value	$8,593	$8,239

Net effect: -$238 (FTNT slightly ahead after 3 weeks). Too early to judge ? long-term AAPL's compounding stability likely makes this a sound swap.

Open Position Analysis

Stock	Type	Entry	Cost	Current	Return	Peak	From Peak
TSLA	Core	2024-06	$26,533	$37,333	+40.7%	$489.88	-14.8%
NVDA	Core	2024-03	$21,006	$24,901	+18.5%	$207.03	-8.2%
GOOGL	Core	2024-06	$15,108	$21,227	+40.5%	?	?
AAPL	Core	2021-09	$11,912	$16,661	+39.6%	?	?
GOLD	Value	2021-01	$5,398	$15,340	+184.1%	?	?

Recommended Exit Rules by Position Type

Type	Holdings	Exit Rule	Rationale
Core	TSLA, NVDA, GOOGL, AAPL	Don't sell. Only rebalance if single position back	Every single position that	Every single position back test was a mistake. These stocks recovered ev
Value	GOLD, WFC, XOM, VDE, BRK.B, T	Don't sell. Dividends compound at cost basis	WFC dividends ($3,379) already repaid full cost basis ? shares are e
Speculative	IBIT, DXYZ	Sell immediately if price breaks below 50-day	IBIT ? 20% from cost of $2,365 with no fundamental support	Speculative positions lack the fundamentals to ju
Cyclical	FCX, DAL	Batch sell 1/3 at +30%, +60%, +100% or 25% trailing stop	CCL ? 25% trailing stop lost $7,118. Batch selling captures gains while ret

200-Day Moving Average: When It Matters

Type	Break below 200MA?	Action
Core	Backtest shows TSLA, NVDA, GOLD all broke 200MA and recovered to new highs. Selling wo	Don't sell
Value	Same ? these are long-term compounders	Don't sell
Speculative	IBIT breaking 200MA was a clear signal. No fundamental support to justify	Sell immediately
Cyclical	Partial exit preserves some upside if recovery happens, limits downside if it	Reduce 50%

Key Takeaways

1. Stock picking is your strength ? 9/11 positions beat S&P 500 from entry date (+10.7pp combined alpha)
2. Selling is where you lose money ? every early sell cost you $10,900 in aggregate opportunity cost
3. Buy & Hold (+49.5%) beats your actual decisions (+41.0%) ? the gap is entirely from CCL and BA sold too early
4. Only exception: speculative positions need stop losses ? IBIT proves that high-conviction exits can't apply to speculative bets
5. Trailing stop and MA exits destroy DCA portfolios ? both strategies produced negative returns (-14% and -10%)
6. Rule of thumb: the higher your conviction, the wider your stop. Core = no stop. Speculative = tight stop. Cyclical = batch sell
